

DELIVERING SAFETY AND RELIABILITY THROUGH INDUSTRY COLLABORATION

Webinar - 3 June - 13.00 to 13.45

The railway is made up of many organisations delivering different parts of the railway. But, all those parts make up one system. Collaboration is needed to make it work and to ensure it's safe.

The Rail Safety and Standards Board (RSSB) was set up as an independent body to address the need for a system-wide perspective on standards, research, and a range of cross-industry functions. Today, working with its members, RSSB drives improvements in health and wellbeing, and in delivering a safer, more efficient and sustainable rail system.

With highlights for safety and reliability, join our speakers to hear about RSSB's work stimulating cross-industry initiatives and projects, maximising data, and promoting innovation.

Fotis Zapantis, Safety Intelligence Analyst
Giulia Lorenzini, Senior Partnerships Manager
